

H-140

HOLLOW BLOCKS

Partition Walling • Retaining Walling • Infill Blocks

H-140 hollow blocks are a **lighter alternative** to solid S-140 blocks, giving a weight-saving of up to **17%**. In addition to regular walling, these blocks are capable of sustaining low load-bearing applications. Their design also makes them suitable for constructing a steel reinforced, retaining wall.

H-140 hollow blocks are equivalent in price and strength to coral blocks, with an **extra 15% surface coverage**, allowing a further saving towards grouting. These engineering blocks provide added **stability** compared to their H90 counterparts. In addition, they act as thermal insulators due to their hollowness.

Building with H-140 is an ideal walling solution to bring down construction costs, where structural requirements are minimal.
