

S140

SOLID BLOCKS

External Walling • Boundary Walling • Load Bearing

S140 solid blocks are offered as an alternative to S190, for applications with lower load-bearing demands, such that the overall weight of the structure can be reduced.

These blocks can be safely used for boundary walling as well as partition walling in multi-storey buildings. In addition to weight, the overall cost of a structure can also be significantly cut back.

Furthermore, S140 blocks can serve as a versatile alternative to slab casting for applications such as concrete shelving and building canopies.
