

S90

SOLID BLOCKS

External Walling • Boundary Walling • Load Bearing

S90 solid blocks are offered as an alternative to S190, for applications with low load-bearing demands, such that the overall weight of the structure can be reduced. Some of these applications include partition and boundary walling. In addition to weight, the overall cost of a structure can also be significantly cut back.

Furthermore, S90 blocks can serve as a versatile alternative to slab casting for applications such as concrete shelving and building canopies.
